

SKYSCRAPER

WEBSITE MASTER WORKFLOW

Cinematic entry → architectural scroll → project worlds → trust → lead generation

LOCKED DIRECTION

BRING HOME TO QUALITY

This document is the implementation handoff for the website workflow currently locked. The landing film is already produced. The 35-second architectural scroll sequence is also already prepared as image frames. The website builder is responsible for responsive composition, typography, transitions, information layers and lead-generation behavior — not for redesigning the supplied cinematic assets.

CORE RULE: The supplied video and image sequences are the visual source. Do not add text, logos, UI, fake architecture or AI-generated elements inside those assets. Website text sits around the media, not on top of the prepared frames unless explicitly required by the final layout.

01 SYSTEM LOCK

LOCKED ASSET	WHAT THE BUILDER DOES
~1:10 landscape cinematic landing film	Responsive container, header treatment, entry/exit transition, playback behavior and mobile crop/preview.
35-sec architectural scroll image sequence	Frame sequencing, scroll timing, preloading, text/typography around frames, responsive scaling and 3D-like camera feel.
Deonarayan architectural references	Use only supplied/source-locked architecture. No redesign.
Anima Sky architectural references	Use only supplied/source-locked architecture. No redesign.
Brand direction	Editorial architecture + cinematic restraint + technical precision.

The website should feel like a digital architectural practice — not a property portal.

No generic real-estate hero cards, fake statistics, excessive rounded cards, glassmorphism, gold-luxury gradients, floating particles, cursor gimmicks, random bounce animations or invented project claims.

02 LANDING HERO — VIDEO CONTAINER

The hero asset remains a landscape cinematic film. The website should frame it correctly rather than modifying the film. The film itself contains the emotional storytelling. No additional text is burned into the video.

MOBILE RULE

Do not create a separate mobile video unless a mobile-specific master is later supplied. The responsive implementation should use the same cinematic asset with a deliberate focal crop. If the crop damages the storytelling, use a contained 16:9 presentation against the dark page background rather than destroying the composition.

HEADER / LEDGER AROUND THE VIDEO

Layer	Desktop	Mobile
Top navigation	Minimal / overlay / transparent until interaction	Compact menu icon + logo
Hero media	Dominant, full-bleed	Dominant, controlled crop or contained cinematic panel
Text over film	NONE	NONE
CTA during film	NONE	NONE
After film	Logo + tagline transition	Same

03 LANDING FILM — ENTRY / EXIT BEHAVIOR

01 — BLACK / ENTRY

Website opens quiet. No conventional hero headline.

02 — DOOR / ARRIVAL

Existing film plays. No UI laid over the scene.

03 — LIFE SEQUENCE

Child → window → couple → generations. Preserve the film as delivered.

04 — BRAND RESOLUTION

SKYSCRAPER / BRING HOME TO QUALITY becomes the bridge into the website.

05 — HANDOFF

Black frame / logo resolves into the first website section.

IMPORTANT

The builder can add a subtle loading state, mute/unmute control or replay control if technically necessary, but the first-view experience must remain clean. Do not place a cookie banner, location prompt, project card, enquiry form or promotional popup over the cinematic opening.

04 35-SECOND ARCHITECTURAL SCROLL

The 35-second sequence is supplied as prepared frames. Treat it as a scroll-driven image film. The user scroll position controls which frame is shown. The sequence should feel like an FPV camera moving through the actual architectural space.

01 → 02 → 03 → 04 → 05 → 06 → 07 → 08 → ... → final frame

PHASE	APPROX. SCROLL WINDOW	PURPOSE
Opening	0–5 sec	Establish exterior / approach / first architectural reveal.
Arrival	5–10 sec	Move into entrance / threshold.
Transition	10–17 sec	Architecture becomes the subject.
Interior	17–25 sec	Reveal interior work / spatial progression.
Detail	25–31 sec	Material / finish / architectural detail.
Resolution	31–35 sec	Arrive at final composition and hand off to project story.

TEXT RULE: No text is baked into the frames. Website text may appear as an external layer beside/above/below the media, and the builder/AI can decide the exact copy treatment after the visual sequence is implemented.

05 HOW THE 35-SECOND SCROLL SHOULD FEEL

Input	Scroll position
Output	Frame index / image
Movement	Continuous, not slideshow-like
Pinning	Pin the visual while the section consumes scroll height
Preload	Preload initial frames; progressively load remaining frames
Desktop	Large visual field; text can occupy a separate editorial column
Mobile	Prioritize image area; text becomes compact and may appear between visual beats
Reduced motion	Offer a static/fallback presentation if motion is reduced

TEXT LAYER — LEFT OPEN FOR THE BUILDER

The visual frames do not need to contain explanatory labels. Instead, the site can introduce short editorial words/phrases as the camera moves: architecture, material, light, space, craft, progress, or other wording that is genuinely supported by the scene. The final copy should be decided after seeing the actual frame sequence in-browser.

Do not permanently attach copy to the frame sequence before the website composition is tested.

06 MASTER WEBSITE FLOW

01 CINEMATIC ENTRY — existing ~1:10 film

02 BRAND RESOLUTION — SKYSCRAPER / BRING HOME TO QUALITY

03 WHAT IS SKYSCRAPER? — editorial introduction

04 THE SKYSCRAPER WAY — philosophy / process

05 35-SECOND ARCHITECTURAL SCROLL — prepared frame sequence

06 DEONARAYAN ESTATE — project world

07 DEONARAYAN 3D BUILDING — interactive model / fallback

08 FACTS / PLANS / SPECIFICATIONS / LOCATION

09 ANIMA SKY RESIDENCY — project world / SOLD OUT

10 ANIMA 3D / PLANS / SPECIFICATIONS / CHAPTER

11 FUTURE — direction without invented projects

12 STORIES — architecture / process / place / materials

13 CONTACT / ENQUIRE — lead capture

14 FINAL BRAND FRAME — SKYSCRAPER / BRING HOME TO QUALITY

07 PROJECT PAGE TEMPLATE

01	PROJECT HERO Architectural visual / 3D. No video hero.
02	PROJECT IDENTITY Name + status + only verified factual descriptors.
03	EXPLORE THE BUILDING Interactive 3D model or approved visual fallback.
04	ARCHITECTURE Editorial presentation of actual building form and details.
05	PLANS Original supplied floor plans; zoom / pan / fullscreen.
06	RESIDENCES Actual unit configurations and areas only.
07	SPECIFICATIONS Technical information from approved source material.
08	LOCATION Verified address + map; source required where not verified.
09	GALLERY Editorial image sequence; no repetitive AI gallery.
10	ENQUIRE Project-specific lead form / call / WhatsApp.

08 LEAD GENERATION SYSTEM

The website should create enquiry opportunities throughout the experience without turning every section into a sales banner.

TRIGGER	USER ACTION	CAPTURE
Project section	Enquire	Project + name + phone
Floor plan	Request plan / information	Selected project + interest
Location	Site visit	Project + preferred contact
Persistent CTA	Enquire	Short form
Final contact	Start a conversation	Full lead form

FORM FLOW

WHAT ARE YOU LOOKING FOR? — Home / Project information / Site visit / General enquiry

WHICH PROJECT? — Deonarayan Estate / Anima Sky Residency / General

CONTACT — Name / Phone / Email

CONFIRMATION — Thank you + next step

09 VISUAL LANGUAGE

USE	AVOID
Architectural black / warm paper / stone / charcoal	Generic black + gold luxury template
Editorial serif + precise sans	Too many fonts
Large negative space	Dense card grids
Real architecture / supplied models	AI redesigns
Controlled parallax / masking / camera motion	Bounce / spin / particle effects
Material detail / plans / drawings	Fake lifestyle stock
Quiet CTA system	SALE / BOOK NOW everywhere
Technical data presented beautifully	Property-portal specification boxes

The website should feel expensive because of composition, restraint, precision and interaction — not because of decorative effects.

10 RESPONSIVE + TECHNICAL BEHAVIOR

AREA	DESKTOP	MOBILE
Hero film	Large cinematic stage; landscape composition protected	Controlled crop or contained 16:9 cinematic panel; never distort video
Navigation	Minimal overlay + full nav	Compact menu / logo / enquiry
35-sec scroll	Large pinned image + optional editorial text column	Large image + shorter text blocks; touch/scroll friendly
3D models	High-quality model + smooth camera	Optimized model / lower quality fallback
Floor plans	Large viewer + controls	Pinch zoom + swipe + fullscreen
Lead CTA	Quiet persistent edge CTA	Sticky bottom action bar
Performance	Progressive image/frame loading	Aggressive lazy loading + mobile frame optimization

ACCESSIBILITY

Provide reduced-motion behavior, keyboard-accessible controls, readable contrast, accessible forms, meaningful alt text for static images, and a usable fallback when 3D or image-sequence motion cannot run.

11 AI WEBSITE BUILDER HANDOFF

The builder may decide:

- Exact typography pairing and responsive type scale.
- Spacing, section heights and breakpoint behavior.
- The exact short copy around the 35-second image sequence after inspecting the frames.
- Animation easing, transition duration and scroll interpolation.
- 3D loading strategy and quality tiers.
- CMS/data structure for project information and lead capture.
- Form validation, CRM/webhook integration and analytics events.

The builder may NOT decide:

- New architectural geometry.
- New project facts.
- Fake amenities, awards, statistics, prices, RERA details or addresses.
- Text embedded into the supplied hero film or supplied scroll frames.
- A generic property-portal visual redesign.
- A replacement of the supplied architecture with AI-generated buildings.

IF SOURCE INFORMATION IS MISSING: use “SOURCE REQUIRED” rather than inventing it.

12 FINAL BUILD CHECKLIST

- Hero video is the first visual experience.
- No text is burned into the hero video.
- Desktop hero composition preserves the landscape cinematic framing.
- Mobile uses a deliberate crop/contained presentation — no distortion.
- Hero transitions into SKYSCRAPER / BRING HOME TO QUALITY.
- 35-second scroll uses supplied frames only.
- No text is embedded into the scroll frames.
- Scroll sequence feels continuous, not like a slideshow.
- Deonarayan uses verified architecture and project data.
- Anima uses verified/source-controlled architecture and project data.
- 3D models have mobile fallbacks.
- Original floor plans remain available and zoomable.
- Lead capture exists at project and final-contact stages.
- No invented claims are visible anywhere.
- No generic AI-real-estate visual language has entered the site.
- Reduced-motion / accessibility behavior is implemented.
- Images and frames are optimized and lazy-loaded.

FINAL EXPERIENCE:

Emotion → Brand → Architecture → Evidence → Projects → Future → Conversation.

FINAL EXPERIENCE

EMOTION → BRAND → ARCHITECTURE → EVIDENCE → PROJECTS → FUTURE → CONVERSATION
